

## 5-Fluorouracil, epiRUBicin 100 and cycloPHOSphamide (FEC 100) Therapy

### INDICATIONS FOR USE:

INDICATION	ICD10	Regimen Code	Reimbursement Status
Neoadjuvant treatment for breast carcinoma	C50	00265a	Hospital
Adjuvant treatment for breast carcinoma	C50	00265b	Hospital

### TREATMENT:

The starting dose of the drugs detailed below may be adjusted downward by the prescribing clinician, using their independent medical judgement, to consider each patients individual clinical circumstances.

5-Fluorouracil, epiRUBicin and cycloPHOSphamide are administered once every 21 days for 6 cycles.

Facilities to treat anaphylaxis MUST be present when systemic anti-cancer therapy (SACT) is administered.

Admin. Order	Day	Drug	Dose	Route	Diluent & Rate	Cycle
1	1	epiRUBicin	100mg/m <sup>2</sup>	IV Bolus	Via the tubing of a free-running intravenous saline infusion over a period of up to 30min.	Every 21 days
2	1	5-Fluorouracil <sup>a</sup>	500mg/m <sup>2</sup>	IV Bolus	N/A	Every 21 days
3	1	cycloPHOSphamide <sup>b</sup>	500mg/m <sup>2</sup>	IV	250ml 0.9% NaCl over 30min	Every 21 days
Lifetime cumulative dose for epiRUBicin is 900mg/m <sup>2</sup> .						
<b>In establishing the maximal cumulative dose of an anthracycline, consideration should be given to the risk factors outlined below<sup>i</sup> and to the age of the patient.</b>						
<sup>a</sup> See dose modifications section for patients with identified partial dihydropyrimidine dehydrogenase (DPD) deficiency.						
<sup>b</sup> cycloPHOSphamide may also be administered as an IV bolus over 5-10 mins.						

Radiation is contraindicated in combination with chemotherapy because of toxicity.

### ELIGIBILITY:

- Indications as above
- ECOG status 0-2
- Adequate haematological, renal and liver status

### EXCLUSIONS:

- Hypersensitivity to 5-Fluorouracil, epiRUBicin, cycloPHOSphamide or any of the excipients
- Uncontrolled high blood pressure, unstable angina, symptomatic congestive heart failure, myocardial infarction within the preceding 6 months, serious uncontrolled cardiac dysrhythmia
- Patients previously treated with maximum cumulative doses of epiRUBicin or any other anthracycline

NCCP Regimen: 5-Fluorouracil, epiRUBicin (100) and cycloPHOSphamide (FEC100) Therapy	Published: 15/11/2015 Review: 21/12/2026	Version number: 6
Tumour Group: Breast NCCP Regimen Code: 00265	ISMO Contributor: Prof Maccon Keane	Page 1 of 7

Use of these documents is the responsibility of the prescribing clinician and is subject to HSE's terms of use available at <http://www.hse.ie/eng/Disclaimer>

*This information is valid only on the day of printing, for any updates please check [www.hse.ie/NCCPchemoregimens](http://www.hse.ie/NCCPchemoregimens)*

- Pregnancy or lactation
- Known complete dihydropyrimidine dehydrogenase (DPD) deficiency

## PRESCRIPTIVE AUTHORITY:

The treatment plan must be initiated by a Consultant Medical Oncologist.

## TESTS:

### Baseline tests:

- FBC, renal and liver profile
- ECG
- MUGA scan or echocardiogram if clinically indicated or > 65 years
- DPD testing prior to first treatment with 5-Fluorouracil using phenotype and/or genotype testing unless patient has been previously tested

### Regular tests:

- FBC, renal and liver profile prior to each cycle
- MUGA scan or echocardiogram if clinically indicated

### Disease monitoring:

Disease monitoring should be in line with the patient's treatment plan and any other test/s as directed by the supervising Consultant.

## DOSE MODIFICATIONS:

- Consider a reduced starting dose in patients with identified partial DPD deficiency
  - Initial dose reduction may impact the efficacy of treatment
  - In the absence of serious toxicity, subsequent doses may be increased with careful monitoring
- Any dose modification should be discussed with a Consultant
- Doses are adjusted based on Day 1 counts (Table 1) and previous cycle febrile neutropenia (Table 2)
- No dose reduction for nadir counts
- G-CSF prophylaxis (using standard or pegylated form) may be added up front at the discretion of the prescribing consultant

## Haematological:

**First and Second occurrence of low counts:** At the beginning of a cycle (Day 1):

- If ANC < 1.5x10<sup>9</sup>/L and/or platelets < 100x10<sup>9</sup>/L, **DELAY** for one week
- Then after a one week delay and no febrile neutropenia in a previous cycle, treat as below (Table 1)

NCCP Regimen: 5-Fluorouracil, epiRUBicin (100) and cycloPHOSphamide (FEC100) Therapy	Published: 15/11/2015 Review: 21/12/2026	Version number: 6

**Table 1: First and Second Occurrence of Low Counts**

ANC (x10 <sup>9</sup> /L)		Platelets (x10 <sup>9</sup> /L)		Dose (Day 1)	G-CSF option
≥ 1.5	and	≥ 100	1 <sup>st</sup> occurrence	100%	
			2 <sup>nd</sup> occurrence	75% of previous cycle dose	100% regimen * with G-CSF on Days 4 to 11 (adjust as needed)
1 to 1.49**	and	≥ 100	1 <sup>st</sup> occurrence	75%**	100% regimen * with G-CSF on Days 4 to 11 (adjust as needed)
			2 <sup>nd</sup> occurrence	Delay 1 week or until ANC ≥1.5, then give 75% of previous cycle dose	75% regimen*** with G-CSF daily on Days 4 to 11 (adjust as needed)
<1	or	< 100	1 <sup>st</sup> occurrence	Delay until ANC ≥ 1.5 and platelets ≥ 100 then give 75%	Delay until ANC ≥ 1.5 and platelets ≥ 100 then give 100% regimen with G-CSF daily on days 4 to 11 (adjust as needed)
		< 100	2 <sup>nd</sup> occurrence	Delay 1 week or until ANC ≥1.5 and platelets ≥100 then give 75% of previous cycle dose	
*100% regimen refers to Cycle 1 doses i.e. epiRUBicin 100 mg/m <sup>2</sup> , 5-Fluorouracil 500 mg/m <sup>2</sup> and cycloPHOSphamide 500 mg/m <sup>2</sup>					
** If the ANC > 1 x 10 <sup>9</sup> /L, 100% dose of previous cycle may be used at the discretion of the medical oncologist					
***75% regimen refers to 75% of Cycle 1 doses i.e. epiRUBicin 75 mg/m <sup>2</sup> , 5-Fluorouracil 375 mg/m <sup>2</sup> and cycloPHOSphamide 375 mg/m <sup>2</sup>					

**Table 2: Febrile neutropenia**

Event	Dose Reduction Option	G-CSF option
1 <sup>st</sup> episode	75% of previous cycle dose if Day 1 ANC ≥1.5 and platelets ≥100	100% regimen* with G-CSF daily on Days 4 to 11 (adjust as needed)
2 <sup>nd</sup> episode	50% of previous cycle dose if Day 1 ANC ≥1.5 and platelets ≥100	75% regimen** with G-CSF daily on Days 4 to 11 (adjust as needed)
3 <sup>rd</sup> episode	<b>No dose reduction option</b>	75% regimen** with G-CSF daily on Days 4 to 11 (adjust as needed)
*100% regimen refers to Cycle 1 doses i.e. epiRUBicin 100 mg/m <sup>2</sup> , 5-Fluorouracil 500 mg/m <sup>2</sup> and cycloPHOSphamide 500 mg/m <sup>2</sup>		
**75% regimen refers to 75% of Cycle 1 doses i.e. epiRUBicin 75 mg/m <sup>2</sup> , 5-Fluorouracil 375 mg/m <sup>2</sup> and cycloPHOSphamide 375 mg/m <sup>2</sup>

## Renal and Hepatic Impairment:

**Table 3: Dose modification in renal and hepatic impairment**

Drug	Renal Impairment	Hepatic Impairment			
5-Fluorouracil	Consider dose reduction in severe impairment only	<b>Bilirubin (micromol/L)</b>		<b>AST</b>	<b>Dose</b>
		<85		<180	100%
		>85	or	>180	CI
		Clinical decision. Moderate hepatic impairment; reduce initial dose by 1/3. Severe hepatic impairment, reduce initial dose by 1/2. Increase dose if no toxicity.			
epiRUBicin	Dose reduction may need to be considered where CrCl <10ml/min. Clinical decision.	<b>Bilirubin (micromol/L)</b>		<b>AST</b>	<b>Dose</b>
		24-51	or	2-4 x ULN	50%
		51-85	or	>4 x ULN	25%
		>85			omit
Cyclophosphamide	<b>CrCl (ml/min)</b>	<b>Dose</b>			
	>20	100%			
	10-20	75%			
	<10	50%			
Severe impairment: Clinical decision					

## Management of adverse events:

**Table 4: Dose modifications based on Adverse Events**

Adverse reactions	Recommended dose modification
Grade ≥ 3 Stomatitis	Delay treatment until recovered then give 75% dose of Day 1 of previous cycle. Maintain dose reduction for all subsequent cycles.

## SUPPORTIVE CARE:

### EMETOGENIC POTENTIAL:

- epiRUBicin – high (**Refer to local policy**).
- 5-Fluorouracil - low (**Refer to local policy**).
- cycloPHOSphamide – moderate (**Refer to local policy**).

**PREMEDICATIONS:** Not usually required

**OTHER SUPPORTIVE CARE:** Patients should have an increased fluid intake of 2-3 litres on day 1 to prevent haemorrhagic cystitis associated with cycloPHOSphamide.

## ADVERSE EFFECTS / REGIMEN SPECIFIC COMPLICATIONS:

The adverse effects listed are not exhaustive. Please refer to the relevant Summary of Product Characteristics for full details.

- **Neutropenia:** Fever or other evidence of infection must be assessed promptly and treated appropriately.

### epiRUBicin

- **Extravasation:** epiRUBicin causes pain and tissue necrosis if extravasated (Refer to local extravasation guidelines).
- **Cardiac Toxicity:** Clinical cardiac assessment is required prior to epiRUBicin if cardiac function is equivocal and recommended at any time if clinically indicated with a formal evaluation of LVEF.

### 5-Fluorouracil

- **Myocardial ischemia and angina:** Occurs rarely in patients receiving 5-Fluorouracil. Development of cardiac symptoms including signs suggestive of ischaemia or of cardiac arrhythmia is an indication to discontinue treatment. If there is development of cardiac symptoms patients should have urgent cardiac assessment. Generally, re-challenge with 5-Fluorouracil is not recommended as symptoms potentially have a high likelihood of recurrence which can be severe or even fatal. Seeking opinion from cardiologists and oncologists with expert knowledge about 5-Fluorouracil toxicity is strongly advised under these circumstances. The toxicity should also be noted in the patient's allergy profile.
- **DPD deficiency:** DPD is an enzyme encoded by the DPYD gene which is responsible for the breakdown of fluoropyrimidines. Patients with DPD deficiency are therefore at increased risk of fluoropyrimidine-related toxicity, including for example stomatitis, diarrhoea, mucosal inflammation, neutropenia and neurotoxicity. Treatment with 5-Fluorouracil, capecitabine or tegafur-containing medicinal products is contraindicated in patients with known complete DPD deficiency. Consider a reduced starting dose in patients with identified partial DPD deficiency. Initial dose reduction may impact the efficacy of treatment. In the absence of serious toxicity, subsequent doses may be increased with careful monitoring. Therapeutic drug monitoring (TDM) of 5-Fluorouracil may improve clinical outcomes in patients receiving continuous 5-Fluorouracil infusions.
- **Hand-foot syndrome (HFS),** also known as palmar-plantar erythrodysesthesia (PPE) has been reported as an unusual complication of high dose bolus or protracted continuous therapy for 5-Fluorouracil.

## DRUG INTERACTIONS:

- 5-Fluorouracil significantly reduces the metabolism of warfarin. INR and signs of bleeding should be monitored regularly and dose of warfarin adjusted as required.
- 5-Fluorouracil is contraindicated in combination with brivudin, sorivudin and analogues as these are potent inhibitors of the 5-Fluorouracil-metabolising enzyme DPD.
- Current drug interaction databases should be consulted for more information.

Comments and feedback welcome at [oncologydrugs@cancercontrol.ie](mailto:oncologydrugs@cancercontrol.ie).

<sup>ii</sup> Cardiotoxicity is a risk associated with anthracycline therapy that may be manifested by early (acute) or late (delayed) effects.

Risk factors for developing anthracycline-induced cardiotoxicity include:

- high cumulative dose, previous therapy with other anthracyclines or anthracenediones
- prior or concomitant radiotherapy to the mediastinal/pericardial area
- pre-existing heart disease
- concomitant use of other potentially cardiotoxic drugs

In establishing the maximal cumulative dose of an anthracycline, consideration should be given to the risk factors above and to the age of the patient
