NiSRP working to extend payroll service to Section 38s

At the recent HR Summit, Bernard Gloster, HSE CEO, complimented the National integrated Staff Records and Pay (NiSRP) Programme team on their excellent work.

NiSRP is working to extend SAP HR and Payroll to Section 38 Agencies. Having all Section 38 agencies on one system will provide staff with a fully integrated SAP HR and Payroll solution on a digital platform including access to an extensive range of HR, Payroll and Finance reports.

The online HR and Payroll Self Service system also allows staff to view and update their own employee information and perform common HR-related tasks. The range of benefits with the integrated system also provides greater efficiencies, allowing resources to be deployed where they are needed most.

The NiSRP announced an updated certified eLearning course for HR and Payroll Self Service on HSeLanD.

Ivan McConkey, Programme Director NiSRP, explained, "We would encourage all colleagues across the HSE to complete the updated eLearning course for HR and Payroll Self Service on HSeLanD and view recent enhancements to the system and excellent functions that are available to all staff and managers."

Psychotropic medication

The National Dementia Services have recently launched a number of infographics for staff providing care to people with dementia across all settings. These specifically relate to the appropriate prescribing of psychotropic medications for non-cognitive symptoms of dementia. Psychotropic medications are medications capable of affecting the mind, emotions and behaviour through an effect on the chemical makeup of the brain and nervous system.

There are a number of different categories of psychotropic medications including antipsychotics, antidepressants and hypnotics.

Report outlines full scope of post-acute rehabilitation services

There is clear evidence that shorter waiting times to access post-acute rehabilitation services correlates directly to improved patient outcomes, lessens disability and improves service efficiency.

Projected population growth and longer life spans will result in increased demand for rehabilitation within Ireland.

To date, there has been no clear national picture of the range and scope of existing post-acute inpatient rehabilitation services.

A project team was established in 2023, with broad representation from national clinical programmes and oversight from the HSE's Chief Clinical Officer.

The project identified and mapped the scope of post-acute adult inpatient services, funded by the HSE and providing dedicated multidisciplinary rehabilitation.

The report provides a comprehensive overview of the availability and scope of HSE funded post-acute in-patient rehab services, and contains recommendations to support their further development.

This survey identified 43 healthcare facilities providing post-acute inpatient rehab, with a total of 1336 beds identified across a range of acute and community settings.

It provides an in-depth analysis of the availability of beds at a health region level and the criteria for accessing these beds.
