# NCIS QUICK GUIDE

## Site Label Configuration

## Contents

1. Background .....	1
2. Define Label Layout.....	1
3. Configured Labels.....	1
3.1. NCIS Labels .....	2
4. Local Settings .....	3
5. Assigning Labels to be printed .....	7
Appendix 1: Label Types to be assigned with configuration options .....	8
Appendix 2 – Example Labels.....	9

## 1. Background

NCIS Med has labels imported into the system ready for use at sites. Each preparation site needs to select the label configuration they wish to use; there are also some local settings that can be adjusted. This guide explains how labels can be configured at each hospital.

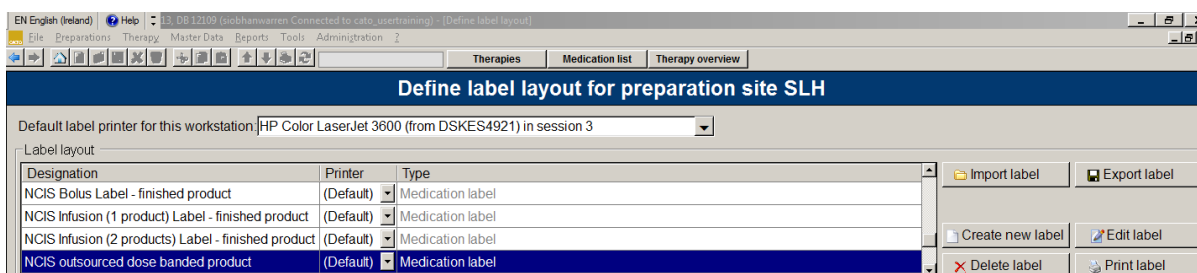

## 2. Define Label Layout

The label settings can be accessed by clicking on the preparation tab in NCIS.Med and clicking ‘define label layout’. This setting can only be accessed by users with the role of NCIS\_Pharmacist, NCIS\_Pharmacy Technician.

## 3. Configured Labels

The first section of the screen contains the ‘designations’ or configured labels. The NCIS medication labels have been configured according to the recommended minimum labelling requirements for pharmacy prepared chemotherapy preparations (appendix 10 of the [NCCP Oncology Medication Safety Review Report](#)). These labels are configured globally and cannot be edited by the local site.

Appendix 1 lists the types of labels that need to be defined in NCIS.Med and the different configurations available.

### 3.1.NCIS Labels

There are two formats of NCIS label available, the main difference between them is whether the Generic Name or Brand Name of the medication is at the top of the label. The two options are:

#### NCIS INN only label

This label uses the Generic (active ingredient) name at the top of the label. Where a product name is required, e.g. a monoclonal antibody this is included as a comment on the label.

Below is an example of this label for a single medication infusion (label name: NCIS infusion (1 product) INN only V1 05.05.20.

Keep out of reach of children

Generic Name →	<b>Bevacizumab 750mg</b> Final Conc. 5.76923 mg/mL in 100mL NaCl 0.9% Bag Viaflo non-PVC Total Vol: 130mL by intravenous infusion over 90 min Med # 13648 <b>DARYL BARLOW</b> Hospital Number: S12401      DOB: 15/08/1976 Admin due: Thu, 12/09/2019 08:00 (Day 1) SLH Ward Avastin Store at: 15-25 degrees Celsius Expiry: 15/09/2019 13:33 Label 1 of 1      St. Luke's Hospital
----------------	---

Product Name where required →

#### NCIS Version 3 label (product name)

This label uses the Brand (product) name at the top of the label. Of note as the Brand (product) Name includes its concentration this is also included on the label.

Below is an example of this label for a single medication infusion (label name: NCIS infusion (1 product) V3 05.05.20.

Keep out of reach of children

Product Name (including concentration) →	<b>Avastin 25mg/ml 750mg</b> (Bevacizumab)      Conc 5.76923 mg/mL in 100mL NaCl 0.9% Bag Viaflo non-PVC Total Vol: 130mL by intravenous infusion over 90 min Med # 13648 <b>DARYL BARLOW</b> Hospital Number: S12401      DOB: 15/08/1976 Admin due: Thu, 12/09/2019 08:00 (Day 1) SLH Ward Avastin Store at: 15-25 degrees Celsius Expiry: 15/09/2019 13:33 Label 1 of 1      St. Luke's Hospital
---	---

Generic Name →

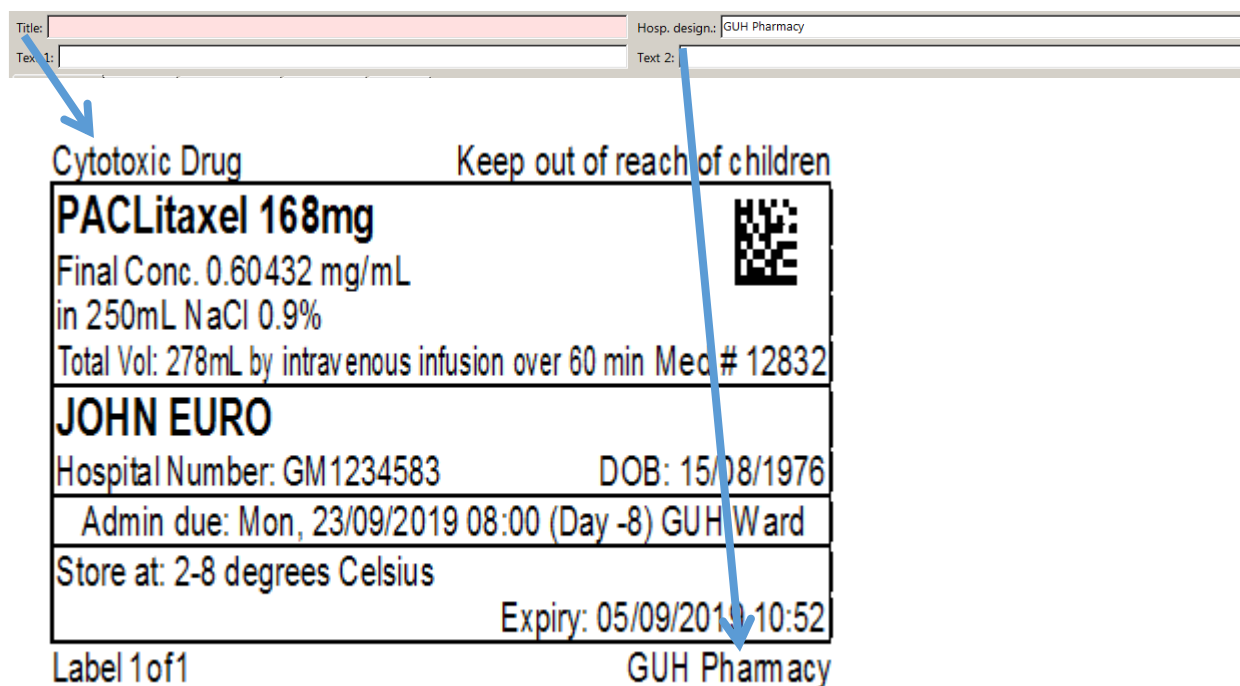

#### CATO Default Labels

NCIS.Med also includes several default labels that come with the BD CATO system. Some of these labels are the only option available as there are no NCIS specific labels developed (e.g. Remainder Labels), see appendix 1.

It is possible to use BD CATO labels as the default label for your site, however it should be noted that only NCIS labels have been configured with consideration of the Medication Safety Report recommendations.

#### 4. Local Settings

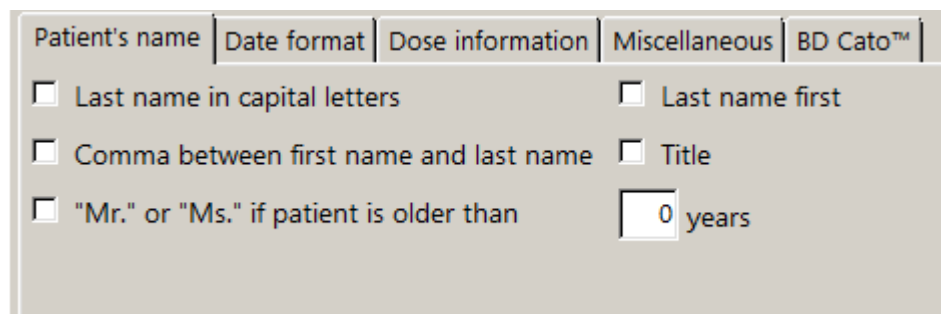

The middle section of the label settings has some options that can be defined locally per preparation site. There are 4 fields displayed. The only one that is currently used in NCIS for the labels is 'hosp. design.' This field contains the name of the preparation site, i.e. the hospital pharmacy dept. This can be filled in to display as the hospital site wishes it to appear on the label. Of note the title field can be completed and will appear in the top left corner of NCIS labels, but only if no other Title has been defined in the drug file (e.g. for Cytotoxic drugs this is defined in the drug file and will always appear in this section of the label).

Next there are 5 separate tabs. If the field mentioned in the tab is used on a label then certain choices can be made e.g. Last name –tick if the last name should appear in capitals. The options that are ticked in the screen shots below are suggested settings to optimise layout of NCIS configured labels however **not** all local settings in these tabs can be applied to the NCIS defined labels, but will work with CATO default labels. Changes that are made here will only apply to labels for medications prepared or dispensed by the local preparation site.

#### Patient's name

NCIS suggested Settings:

Using CATO Default label with all setting ticked:

<b>Cytotoxic Drug – Proteasome Inhibitor</b>		<b>GUH Pharmacy</b>	
<b>Mr. EURO, JOHN</b>		Pat. # GM1234583

**Container Description appears on NCIS Labels**

## 5. Assigning Labels to be printed

The last section of the screen assigns the labels to be printed:

2 Number	Label	4 For status / flag
1	NCIS Infusion (1 product) Label - finished product	<Default>

In the above example where a medication is ① an infusion with 1 product, ② 1 label will print with the template ③ 'NCIS Infusion (1 product) Label – finished product' at the time of the ④ default setting (confirmation of preparation for prepared products or confirmation of dispense for dispensed products).

The number of labels to be printed for each medication can be determined locally per preparation site here

Number	Label	For status / flag
1	NCIS Infusion (1 product) Label - finished product	<Default>

For all label types together, rules can be set for the printing of additional labels, depending on the light protection required for the medication (this is built into the drug file for each product).

If light protection is required for either the finished preparation or administration, this can be selected at the bottom of the screen:

Additional label if light protection is required for finished preparation  Additional label if light protection is required for administration  No label print at the end of gravimetric preparation

Appendix 1 lists the type of labels that need to be assigned and the options available.

## Appendix 1: Label Types to be assigned with configuration options

Label Type	Description	Options
Infusion with one product	Final label for a Prepared Infusion with one drug	NCIS infusion (1 product) INN only  NCIS infusion (1 product)  Cato 1 product
Infusion with two products	Final label for a Prepared Infusion with two drugs	NCIS infusion (2 products) INN only  NCIS infusion (2 products)  Cato 2 products
Infusion with three products	Final label for a Prepared Infusion with three drugs	NCIS infusion (3 products) INN only  NCIS infusion (3 products)  Cato 3 products
Injection	Final label for a Prepared bolus injection	NCIS bolus INN only  NCIS bolus  Cato bolus
Remainder Label	Label to attach to remainders during storage	Cato remnant
Patient Label	Outer bag label	Cato patient
Pre-prep label: injection	In isolator preparation label for a bolus injection	NCIS – in isolator bolus
Pre-prep label: infusion with one product	In isolator preparation label for an infusion with one drug	NCIS – in isolator infusion (1 product)
Pre-prep label: infusion with two products	In isolator preparation label for an infusion with two drugs	NCIS – in isolator infusion (2 products)
Pre-prep label: infusion with three products	In isolator preparation label for an infusion with three drugs	NCIS – in isolator infusion (3 products)
Dispensed Medications	Final label for a dispensed product of any type	NCIS dispensed

## Appendix 2 – Example Labels

### Infusion with 1 Product

NCIS infusion (1 product) INN only V1 05.05.20:

Keep out of reach of children

<b>Bevacizumab 750mg</b>		
Final Conc. 5.76923 mg/mL in 100mL NaCl 0.9% Bag Viaflo non-PVC Total Vol: 130mL by intravenous infusion over 90 min Med # 13648		
<b>DARYL BARLOW</b>		
Hospital Number: S12401		DOB: 15/08/1976
Admin due: Thu, 12/09/2019 08:00 (Day 1) SLH Ward Avastin		
Store at: 15-25 degrees Celsius		Expiry: 15/09/2019 13:33
Label 1 of 1		St. Luke's Hospital
